Objective

Scheduling researches have been evolving in their theoretical aspects and practical applications in the last several decades. The area of the researches is widely spreading from industries for tangible products such as manufacturing systems, project management, logistics and transportation, to services for intangible products such as health care, education, sports management, and so on. For several organizations, scheduling is one of the key technologies to improve the quality of service and to survive in the fierce competition. This international symposium has aimed to give opportunities for researchers and practitioners to exchange innovative ideas on various topics of scheduling and related areas.

Topics of Interest: Whole themes on scheduling, which include Scheduling Theory, Practical, Scheduling Technologies, Optimization Method, Evaluation Method, CAD/CAM, TOC, APS, SCM, ERP, CIM, JIT, Planning, Concurrent Engineering, Transport, Network communication, Health care, Service engineering, Enterprise management, Manufacturing simulation
